

# Exhibit C

Footprints Sync

How are the controls actually manifest:

WAA

- GAIA Service flag
- Usually not proactively checked by services. Instead, the write is just attempted and fails if the WAA is opted out.

SWAA

- No writing O&O activitiy to G-K \*\*\*\*\*
- Maybe writing from GAIA stack to Biscotti only? Or Tombstone's to P-logs? Or encrypted
